

GUIDE TO SEARCH FOR DETAILS OF GI IN IPOS DIGITAL HUB

To search for details of a GI, you may access <https://digitalhub.ipos.gov.sg> > **Advanced Search > Geographical Indications** and indicate the relevant search criteria to conduct a search.

The screenshot displays the IPOS Digital Hub website interface. At the top, it identifies itself as a Singapore Government Agency Website. The IPOS Digital Hub logo is on the left, and login options for 'For Business' and 'For Individual' are on the right. A navigation bar includes 'Forms', 'Search', and 'Journals'. The main heading is 'Welcome to IPOS Digital Hub'. Below this, there are three tabs: 'Patent', 'Trade Mark' (which is highlighted in orange), and 'Design'. Under the 'Trade Mark' tab, a process flow is shown with four steps: Step 1: Search for similar trade marks; Step 2: Apply for trade mark protection in Singapore; Step 3: Apply for trade mark protection overseas (Optional); Step 4: Renew trade mark. At the bottom, there is an 'IP Search' section with three buttons: 'Advanced Search' (highlighted with a yellow box), 'Trade Mark Similar Mark Search', and 'Trade Mark Goods and Services Search'. Below these buttons is a search input field with the placeholder text 'Type your search text here', a dropdown menu with 'Please Select', a search icon, and a red search button.

Search and Enquiry

[Basic Search](#) | [Advanced Search](#) | [Trade Mark Similar Mark Search](#) | [Trade Mark Goods and Services Search](#)

General Notes

1. Two wildcard characters (? and #) can be used to facilitate searches for:

- Title of Invention
- Specification of Goods and Services
- Article Name / Non-Physical Product Name

i. Use a question mark (?) to represent up to 1 character. For example, searching Apple? will show results such as Apple and Apples.

ii. Use a hex (#) to represent exactly 1 character. For example, searching Ann# will show results such as Anna, but not Ann.

2. You may use Boolean operators AND, OR, NOT and brackets to refine your search.

3. To search for similar trade marks, use the [Trade Mark Similar Mark Search](#) instead. Newly filed marks may not be shown immediately in the search results due to backend processing.
