

Tool for verifying list of goods and services

(Circular No. 4/2015, dated 17 April 2015)

Introduction

IPOS has developed a tool, the ICGS Autochecker, to help trade mark applicants and agents verify their list of proposed goods and services of a trade mark application for conformity against our pre-approved list of items and to ascertain the proper class those items belong to.

Usage of ICGS Autochecker

The tool consists of two search functions, namely, the multi-item search and flexisearch functions.

The multi-item search function allows users to check a list of multiple items against our pre-approved list of items. The tool will automatically split the list of items which are separated by semi-colons, and verify whether each item is found in our preapproved list and if so, the class the item belongs to.

Where an exact match of an item is not found in our pre-approved list, the flexisearch function allows users to perform more in-depth search of that particular item to find the closest match for it in our pre-approved list.

RSS Newsfeed

As the ICGS Autochecker will be updated regularly, we highly recommend subscribing to the RSS newsfeed to stay updated of changes made to the tool.

Feedback

If you have any feedback regarding the ICGS Autochecker, please email them to: rachel_yong@ipos.gov.sg
